

DigiPlex Norway

Rosenholm

DigiPlex Rosenholm is located at the Rosenholm Business Center campus which gives easy and rapid connection to the center of Oslo City, Gardermoen airport, all major roads and road junctions. The campus was originally designed and built in 1986 as a high technology centre for IBM's Scandinavian operations, which in 1994 included housing the mainframe computers used for the management of the Lillehammer Olympics.

Rosenholm data center comprises some 2 200 m² of customer white technical space (with strong expansion possibilities) providing more than 3m clear floor to ceiling headroom. The Center provides a diverse range of accommodation from secure 'bunkers' to data suites, network operations rooms, workshop and laboratory space as well as Hot-desking and traditional office solutions.

During 2018/19, DigiPlex carried out a substantial upgrading of the main infrastructure including replacement of the mechanical and electrical infrastructure in the Center. The power supplies, cooling and security systems installed at the centre are today "state of the art" and fully meet both today's and future requirements from our customers.

DigiPlex Norway **Rosenholm.**

A colocation rack with DigiPlex is the ideal arrangement if you are seeking the flexibility and scalability that deploying in shared space offers, without reducing the high security, availability or sustainability that DigiPlex data centers provide.

- **Growth potential with rack-by-rack scalability**
- **Predictable monthly costs**
- **All relevant ISO certifications**
- **Multi layered security**
- **Additional security layers can be added on request, eg. biometric**
- **Lockable racks for enhanced security in the colocation area**

DigiPlex Colocation Rack Features:

- 42U of rackable space in highly secure data center
- Adjustable mounting depth
- 600 x 1200 mm chimney rack 42U
- Ready to go installation
- Lockable racks
- Dual power feeds A+B
- 2*basic PDUs
- Pre-installed fiber for flexible and quick installation and ordering of cross connects
- Power from renewable energy sources
- Extensive SLA
- Minimum term of contract - 12 months
- 1543 lbs (700 kgs) capacity
- Cable pass-throughs
- (2) vertical cable management bars included
- 3 kW, 4kW, 5kW, 6kW, 7kW

Add ons:

- DigiPlex Nordic Connect
- Connectivity to MS Azure / AWS Cloud / Megaport
- Redundant fibre
- High density solutions
- Power increase (subject to availability)
- Rack and stack, smart hands, structured cabling, etc
- Access to selection of carriers & network fabrics through a cross connect

DigiPlex Nordic Connect gives DigiPlex customers access to every carrier, content provider, cloud provider and enterprise in our ecosystem, at any of our data centres, through a direct connection (i.e. without going out on the public Internet). When using Nordic Connect for connectivity to cloud service providers the most important benefits with this solution, compared to a traditional public Internet cloud access are:

Stability: Dedicated bandwidth to give your traffic the priority it deserves

Low latency: Direct point-to-point routes without re-routes or internet bottlenecks

Security: Low risk for DDOS attacks

Compliance: Meets requirements for sensitive data governance (GDPR, NISAM, ISO 27001, ESAM, etc)

Our solution is ready to go, with quick delivery and pre-defined equipment optimized for the chosen data center.
